(54) TELEPHONE SYSTEM

(57)Abstract:

PROBLEM TO BE SOLVED: To provide a telephone system by which a user can intentionally transmit a positioned current position to a peripheral device.

SOLUTION: The mobile telephone system 10 uses a data communication function in response to a decision operation of a POS button 17a to transmit positioning information measured by using a GPS section including a GPS antenna 31 and/or a mobile phone signal positioning processing section including a mobile phone communication antenna 21 to other mobile telephone system 50 being a desired communication destination via a base station. The other mobile telephone system 50 uses a built-in map display application or the like to display a map image around received positioning information onto an LCD display section 52 and displays a current position point 53 of the mobile telephone system 10 on the map image.
